### Products Detail

#### Fully Automatic Wire Mesh Fence Welding Machine

**Fully Automatic Wire Mesh Fence Welding Machine** is mainly used to weld fence and floor roof wire netting.

Operation processes: warps and wefts required by the equipment are pre-sheared by an automatic straightening cutting machine, the warps are placed on a corresponding warp groove, and the wefts are placed into a corresponding weft groove, and a fall feeder is controlled for automatic blanking and welding through a stepper motor respectively; the stepper motor controls a mesh drawing process to ensure accurate and uniform grids.

**Both grid size and welding parameters** are set by direct input on an operation panel, which is simple and accurate in operation.

#### Technical parameters:

Wire diameter	3-5mm	Rated voltage	380V
Welding aperture	50x50-300x300mm	Rated power	750kva
Welding width	2500mm	Dimensions	6x3.2x1.8m
Warp quantity	48	Machine weight	4.2t
Welding speed	60times/min	welding mesh length	6-12m
