Products Detail

Steel Grating Fence Machine

- This machine** adopts synchronous control technique, both welding times and separate by digital PLC system with touch screen.
2. so that the operation is much more intelligent, reasonable and has a compression, sub-welding characteristics.
 3. The aircraft welding power is from servo motor , welding speed is much faster and more stable.
 4. welding pressure is provided by Nitrogen gas spring, which is easy to adjust quickly, and the pressure is more evenly.
 5. Line wire and cross wire are fed from coils. CNC sets mesh length, automatic cutting, dropping, arresting and output, which maximized saves labor and greatly increased production.

Machine application:

Mine timbering wire mesh, construction mesh, reinforced mesh.

The main parameter

wire diameter	4-8mm	rated voltage	380v
line wire distance	50-200mm	rated electrical power	8*125KVA
cross wire distance	50-200mm	line wire form	coil
number of electrodes	32	cross wire form	coil
welding speed	80 times/min	dimension	3100*40000*3000mm
wire mesh width	1600mm	wire mesh length	6000mm
